

## TOUCH MULTIFUNCTION INFORMATION KIOSKS

### HARDWARE

These are digital touch panels, that can have a wide range of use everywhere where the public needs to be informed in an attractive and pleasant way. Given the nature of the installation there are 2 basic versions of kiosks: indoor and outdoor.

Outdoor kiosks offer increased resistance against weathering and deliberate tampering. This anti-vandal variant features an almost shatterproof glass and a construction designed to withstand punctures or other rough handling. Of course, the kiosks have an own air conditioning, anti-reflective treatment for good readability in direct sunlight, double locking against unauthorized entry and anchoring of the kiosk to prevent overturning.

The kiosk system is modular, so it can offer an environment designed to meet the exact needs of the SŽDC. In addition to the transport information, the kiosk can collect and display information from other remote sources, e.g. nearby

accommodation, catering, attractions in the vicinity, events in nearby towns, etc. Part of the operating time can be rented out for commercial purposes to specific restaurants, hotels, etc., it can cover the operation costs and servicing of the facility. Last but not least, the kiosk could also serve as a wifipoint for mobile devices of the public and also as a charging station for mobile devices.

Thanks to its modularity, we can assemble the kiosk in order to suit the customer and the needs of the installation. Below are the technical specifications of the most commonly used kiosks.

### OUTDOOR

- > Double sealing against moisture ingress and dust
- > Antivandal treatment
- > Own air conditioning
- > Robust self-supporting construction
- > Increased brightness due to sunlight
